

● Cherry REGINA

Tree: medium vigour, standard habit, auto-sterile, medium productivity.

Blossoming time: very late bloom. Self-sterile.

Fruits: large sized, heart-shaped, deep red spotted skin background colour. Flesh has an excellent taste and very firm texture. This variety is less susceptible to Monilia, it also has a good productive behavior on dwarfing rootstocks.

Harvesting season: late; 30 days post B.Burlat.

Recommended pollenisers: Carmen[◇], Ferrovia, Kordia.
