

● Apple **JEROMINE**^(PBR)

Tree: cultivar belonging to the standard Red Delicious group with medium vigour and good productivity. Subject to alternate bearing after a heavy crop.

Fruit: medium to large size, cone-shaped with bright dark red overcolour that develops early.

The flesh is firm, juicy, with good organoleptic characteristics.

The Jeromine^(PBR) is a mutation of Early Red One® Erovan (selected in France), and has a more attractive and impressive appearance (full red over-colouring) also in flat areas.

Harvest time: Five days before Golden Delicious cl. B.
